✔ **Doctype** Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in.

Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in. The most common doctype is HTML5. It is important to have the correct doctype to ensure that the browser renders the page correctly. If you are using an older version of HTML, you should use the appropriate doctype for that version. For example, if you are using HTML4, you should use the HTML4 doctype. If you are using HTML5, you should use the HTML5 doctype. The HTML5 doctype is the most common and is recommended for all new websites.

● **W3C Validity** W3C Validity is a tool that checks if your HTML code is valid according to the W3C standards.

W3C - World Wide Web Consortium. It is an international community that develops and maintains standards for the World Wide Web. The W3C standards are the rules that govern how the web is structured and how it is displayed. The W3C standards are the foundation of the web. Without the W3C standards, the web would be a chaotic place. The W3C standards ensure that all web pages are structured in the same way and that they are displayed consistently across all browsers. The W3C standards are the key to a successful web presence.

✔ **Meta Tags** Meta tags are HTML tags that provide information about the web page to the search engines and the browser.

Meta tags are HTML tags that provide information about the web page to the search engines and the browser. The most important meta tag is the title tag. It is the title of the web page and is displayed in the search results. Other important meta tags include the description tag, the keywords tag, and the robots tag. The description tag is a brief summary of the web page. The keywords tag is a list of keywords related to the web page. The robots tag tells the search engines whether or not to index the web page. Meta tags are essential for a good search engine ranking.
