✔ **Doctype** Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in.

Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in. The most common doctype is HTML5. It is important to have a doctype to ensure that the browser renders the page correctly. Without a doctype, the browser will use a default doctype, which may not be the one you want. The doctype also affects the layout of the page. For example, the HTML5 doctype is more flexible than the HTML4 doctype. It allows for more variation in the way that elements are used. This is why it is important to have a doctype at the top of every HTML document.

● **W3C Validity** W3C Validity is a tool that checks if your HTML code is valid according to the W3C standards.

W3C - World Wide Web Consortium. It is an international community that develops standards for the World Wide Web. The W3C standards are used to ensure that web pages are consistent and can be accessed by all users. The W3C Validity tool is a free online tool that checks if your HTML code is valid according to the W3C standards. It is a useful tool for web developers to ensure that their code is correct and that their web pages will be accessible to all users. The tool will check for errors in the code and provide suggestions for how to fix them. It is a good idea to use the W3C Validity tool regularly to ensure that your code is always valid.

✔ **Charset** Charset is the character set used in the document. It is usually UTF-8, which is the most common character set for web pages.

Charset is the character set used in the document. It is usually UTF-8, which is the most common character set for web pages. The charset is declared in the HTML document using the charset attribute. It is important to have a charset declared to ensure that the browser can correctly display the text in the document. Without a charset, the browser will use a default charset, which may not be the one you want. The charset also affects the way that the text is encoded. For example, UTF-8 is a more flexible character set than ASCII. It allows for more variation in the way that characters are used. This is why it is important to have a charset at the top of every HTML document.
