✔ **Doctype** Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in.

Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in. The most common doctype is HTML5. It is important to have a doctype because it affects the rendering of the page. Without a doctype, the browser will use a default doctype, which may not be the one you want. The doctype is written as a line of text at the top of the HTML file. It starts with the word 'doctype' followed by the name of the HTML version in quotes. For example, the HTML5 doctype is written as: `<!doctype html>`

● **W3C Validity** W3C is the World Wide Web Consortium. It is an international community of experts who work together to develop standards for the Web.

W3C is the World Wide Web Consortium. It is an international community of experts who work together to develop standards for the Web. The W3C standards are used to ensure that web pages are consistent and can be accessed by all users. The W3C standards are developed through a process of consensus. Experts from different organizations and countries work together to create standards that are widely accepted. The W3C standards are used by web developers to create web pages that are consistent and can be accessed by all users. The W3C standards are also used by web browsers to render web pages. The W3C standards are the foundation of the Web. Without the W3C standards, the Web would be a chaotic place. The W3C standards ensure that the Web is a place where everyone can access information and communicate with each other.

✔ **Encoding** Encoding is the process of converting data into a format that can be stored or transmitted. The most common encoding is UTF-8.

Encoding is the process of converting data into a format that can be stored or transmitted. The most common encoding is UTF-8. UTF-8 is a variable-length character encoding. It can represent any character in the Unicode standard. UTF-8 is used by most web browsers and web servers. It is important to use UTF-8 encoding for web pages because it ensures that all characters are displayed correctly. If you use a different encoding, some characters may not be displayed or may be displayed incorrectly. UTF-8 is the standard encoding for the Web. It is the only encoding that can represent all characters in the Unicode standard. UTF-8 is also the most efficient encoding for most web pages. It uses the fewest bytes to represent most characters. UTF-8 is the best encoding for web pages. It is the only encoding that can represent all characters in the Unicode standard. UTF-8 is also the most efficient encoding for most web pages. It uses the fewest bytes to represent most characters. UTF-8 is the best encoding for web pages.
