✔ **Doctype** Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in.

Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in. The most common doctype is HTML5. It is important to have a doctype to ensure that the browser renders the page correctly. Without a doctype, the browser will use a default doctype, which may not be the one you want. The doctype also affects the layout of the page. For example, the HTML5 doctype is more flexible than the HTML4 doctype. It allows for more variation in the way that elements are used. This is why it is important to have a doctype at the top of every HTML document.

● **W3C Validity** W3C is the World Wide Web Consortium. It is the main international standards organization for the World Wide Web. It develops and maintains the standards for HTML, CSS, and JavaScript.

W3C is the World Wide Web Consortium. It is the main international standards organization for the World Wide Web. It develops and maintains the standards for HTML, CSS, and JavaScript. The W3C standards are used by web developers to create web pages that are compatible with all web browsers. This ensures that the web pages will look and work the same way on all devices. The W3C also provides tools and resources to help web developers create valid web pages. This includes the W3C Markup Validation Service, which checks HTML documents for errors. It also provides a list of the W3C standards and a glossary of the terms used in the standards. The W3C is an important organization for the web community. It helps to ensure that the web is a place where everyone can access and use information.

✔ **Charset** Charset is the character set used in the document. It tells the browser which characters are allowed in the document. The most common charset is UTF-8.

Charset is the character set used in the document. It tells the browser which characters are allowed in the document. The most common charset is UTF-8. It is important to have a charset to ensure that the browser can read the characters in the document correctly. Without a charset, the browser will use a default charset, which may not be the one you want. The charset also affects the way that the characters are displayed. For example, the UTF-8 charset can display characters from many different languages. This is why it is important to have a charset at the top of every HTML document.
