✔ **Doctype** Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in.

Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in. The most common doctype is HTML5. It is important to have the correct doctype to ensure that the browser renders the page correctly. If you are using an older version of HTML, you should use the appropriate doctype for that version. For example, if you are using HTML4, you should use the HTML4 doctype. If you are using HTML5, you should use the HTML5 doctype. The HTML5 doctype is the simplest and most widely supported. It is also the most future-proof. Therefore, it is recommended to use the HTML5 doctype for all new websites.

● **W3C Validity** W3C is the World Wide Web Consortium. It is the international community that develops and maintains the standards for the World Wide Web.

W3C is the World Wide Web Consortium. It is the international community that develops and maintains the standards for the World Wide Web. The W3C standards are the foundation of the World Wide Web. They define how web pages are structured and how they are displayed. The W3C standards are also the basis for many other web technologies, such as CSS and JavaScript. Therefore, it is important to ensure that your website is W3C valid. This means that your website must conform to the W3C standards. There are many tools available to check if a website is W3C valid. One of the most popular is the W3C Validator. It is a free online tool that can check the HTML and CSS of a website. It will tell you if there are any errors and provide suggestions for how to fix them. It is a good idea to use the W3C Validator regularly to ensure that your website is always W3C valid.

✔ **Charset** Charset is the character set used in the document. It defines the mapping between the bytes in the document and the characters that they represent.

Charset is the character set used in the document. It defines the mapping between the bytes in the document and the characters that they represent. The most common charset is UTF-8. It is a variable-length character set that can represent any character in the Unicode standard. UTF-8 is also the most widely supported charset. Therefore, it is recommended to use UTF-8 for all new websites. It is also important to declare the charset in the HTML document. This can be done using the charset attribute in the meta tag. For example, you can use the following code to declare the charset as UTF-8: `<meta charset="UTF-8">`
