✔ **Doctype** Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in.

Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in. The most common doctype is HTML5. It is important to have the correct doctype to ensure that the browser renders the page correctly. If you are using an older version of HTML, you should use the appropriate doctype for that version. For example, if you are using HTML4, you should use the HTML4 doctype. If you are using HTML5, you should use the HTML5 doctype. The HTML5 doctype is the most common and is recommended for all new websites.

● **W3C Validity** W3C Validity is a tool that checks if your HTML code is valid according to the W3C standards.

W3C - World Wide Web Consortium. It is an international community that develops and maintains standards for the World Wide Web. The W3C standards are the rules that govern how the web should work. They ensure that websites are accessible and consistent across different browsers and devices. The W3C standards are developed through a process of consensus and collaboration. They are designed to be flexible and adaptable to the needs of the web. The W3C standards are the foundation of the web as we know it. They are the rules that make the web work. Without the W3C standards, the web would be a chaotic and inconsistent place. The W3C standards are the key to a successful and accessible web.

✔ **Charset** Charset is the character set used in the document. It defines the mapping between the bytes in the document and the characters that they represent.

Charset is the character set used in the document. It defines the mapping between the bytes in the document and the characters that they represent. The most common charset is UTF-8. It is a variable-length character set that can represent any character in the Unicode standard. UTF-8 is the default charset for most websites. It is important to specify the charset in the document to ensure that the browser renders the page correctly. If you do not specify the charset, the browser will assume a default charset, which may not be the correct one for your document. Specifying the charset in the document ensures that the browser renders the page correctly and that the characters are displayed as intended.
