Plating is a process of coating a metal surface with a thin layer of another metal. This is done by electroplating, where the metal to be plated is connected to the negative terminal of a power source, and the metal to be plated with is connected to the positive terminal. The electrolyte solution contains ions of the metal to be plated. As the current flows, the metal ions are reduced at the cathode and deposit on the surface of the metal to be plated. This process is used in many industries, including jewelry, automotive, and electronics. It is also used for decorative purposes and to protect the metal surface from corrosion.
