✔ **Doctype** Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in.

Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in. The most common doctype is HTML5. It is important to have a doctype to ensure that the browser renders the page correctly. Without a doctype, the browser will use a default doctype, which may not be the one you want. The doctype also affects the layout of the page. For example, the HTML5 doctype is more flexible than the HTML4 doctype. It allows for more variation in the way that elements are used. This is why it is important to have a doctype at the beginning of every HTML document.

● **W3C Validity** W3C is the World Wide Web Consortium. It is the main international standards organization for the World Wide Web. It develops and maintains the standards that govern the structure and content of web pages.

W3C is the World Wide Web Consortium. It is the main international standards organization for the World Wide Web. It develops and maintains the standards that govern the structure and content of web pages. The W3C standards are used to ensure that web pages are consistent and can be accessed by all users. This is why it is important to have a W3C valid document. A W3C valid document is one that follows all the W3C standards. This ensures that the document can be accessed by all users and that it is consistent with the other documents on the web. The W3C standards are also used to ensure that web pages are secure and that they do not contain any harmful content. This is why it is important to have a W3C valid document. A W3C valid document is one that follows all the W3C standards. This ensures that the document can be accessed by all users and that it is consistent with the other documents on the web.

✔ **Charset** Charset is the character set used in the document. It tells the browser which characters are allowed in the document. The most common charset is UTF-8. It is important to have a charset to ensure that the browser can read the document correctly.

Charset is the character set used in the document. It tells the browser which characters are allowed in the document. The most common charset is UTF-8. It is important to have a charset to ensure that the browser can read the document correctly. Without a charset, the browser will use a default charset, which may not be the one you want. The charset also affects the layout of the page. For example, the UTF-8 charset is more flexible than the ASCII charset. It allows for more variation in the way that characters are used. This is why it is important to have a charset at the beginning of every HTML document.
