IFRAME

IFRAME is a web browser element that allows you to embed another document, known as a frame, into the current document. It is used to display content from another website or to embed a video player, a map, or a social media widget.

The basic syntax for an IFRAME element is as follows:

```

<iframe src="url" width="width" height="height">
  </iframe>
  
```

The `src` attribute specifies the URL of the document to be loaded into the frame. The `width` and `height` attributes specify the dimensions of the frame.

IFRAMEs are often used to embed content from third-party websites, such as social media feeds, video players, and maps. However, they can also be used for malicious purposes, such as phishing or displaying malware.

For security reasons, modern browsers have implemented various restrictions on IFRAMEs, such as the Same-Origin Policy and the X-Frame-Options header.
