✓ **Flash** `<object data-bbox="100 100 200 200" type="application/x-shockwave-flash" src="...">`

Flash is a software platform for creating rich Internet applications. It is used to create interactive content that can be viewed on a web browser. Flash content is typically created using Adobe Flash Professional and then embedded into a web page using the `<object>` or `<embed>` tags. Flash content can be used for a variety of purposes, including creating animations, interactive presentations, and rich Internet applications. However, Flash content is not supported by all web browsers, and its use is generally discouraged in favor of more modern technologies like HTML5 and CSS3.

✓ **Iframe** `<iframe src="...">`

An iframe is an HTML element that allows you to embed another document inside the current document. It is used to display content from another website or to embed a video player, a map, or a social media widget. The `src` attribute of the `<iframe>` tag specifies the URL of the content to be displayed. It is important to use the `src` attribute correctly to avoid security issues and to ensure that the content is displayed as intended.

1. **SEO** - Search Engine Optimization. It's a process of making your website more visible to search engines like Google, Bing, and Yahoo.

2. **Content** - The information you provide on your website. It can be text, images, videos, or audio. Good content is relevant, informative, and engaging.

3. **Keywords** - Words and phrases that people use to search for information. They are the bridge between what you want to say and what your audience is looking for.

4. **Backlinks** - Links from other websites that point to your website. They are like votes of confidence and can help improve your search engine ranking.

5. **Analytics** - Tools that help you track and measure the performance of your website. They tell you how many people are visiting, where they're coming from, and what they're doing on your site.
