✔ **Doctype** Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in.

Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in. The most common doctype is HTML5. It is important to have the correct doctype to ensure that the browser renders the page correctly. If you are using an older version of HTML, you should use the appropriate doctype for that version. For example, if you are using HTML4, you should use the HTML4 doctype. If you are using HTML5, you should use the HTML5 doctype. The HTML5 doctype is the simplest and most widely supported. It is also the most future-proof. Therefore, it is recommended to use the HTML5 doctype for all new websites.

● **W3C Validity** W3C Validity is a tool that checks if your HTML code is valid according to the W3C standards.

W3C - World Wide Web Consortium. It is an international community that develops and maintains standards for the World Wide Web. The W3C standards are the rules that govern how web pages are created and how they are displayed. These standards are known as the W3C Recommendations. The most important W3C Recommendation is the HTML standard. It defines the rules for creating HTML documents. Other W3C Recommendations include CSS, XML, and SVG. The W3C also provides tools and resources to help developers create web pages that conform to the W3C standards. One of these tools is the W3C Validity checker. This tool checks if your HTML code is valid according to the W3C standards. If there are any errors, it will show them to you and provide suggestions on how to fix them. This is a very useful tool for ensuring that your web pages are valid and that they will be displayed correctly in all browsers.

✔ **Charset** Charset is the character encoding used in the document. It tells the browser how to interpret the characters in the document.

Charset is the character encoding used in the document. It tells the browser how to interpret the characters in the document. The most common charset is UTF-8. It is a variable-length character encoding that can represent any character in the Unicode standard. UTF-8 is also the most widely supported charset. Therefore, it is recommended to use UTF-8 for all new websites. To declare the charset in your HTML document, you should use the charset attribute in the <meta> tag. For example, you can use the following code to declare the charset as UTF-8: <meta charset="UTF-8">. This will ensure that the browser knows how to interpret the characters in your document and that they will be displayed correctly.
