✔ **Doctype** Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in.

Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in. The most common doctype is HTML5. It is important to have a doctype to ensure that the browser renders the page correctly. Without a doctype, the browser will use a default doctype, which may not be the one you want. The doctype also affects the layout of the page. For example, the HTML5 doctype is more flexible than the HTML4 doctype. It allows for more variation in the way that elements are used. This is why it is important to have a doctype at the top of every HTML document.

● **W3C Validity** W3C is the World Wide Web Consortium. It is the main international standards organization for the World Wide Web. It develops and maintains the standards that govern the structure and content of web pages.

W3C is the World Wide Web Consortium. It is the main international standards organization for the World Wide Web. It develops and maintains the standards that govern the structure and content of web pages. The W3C standards are used by web browsers to render web pages. They also provide a common framework for web developers to build web pages. The W3C standards are essential for the proper functioning of the World Wide Web. Without them, the web would be a chaotic place. The W3C standards ensure that web pages are consistent and easy to use. They also provide a common language for web developers to communicate with each other. This is why the W3C standards are so important to the success of the World Wide Web.

✔ **Encoding** Encoding is the process of converting data into a format that can be transmitted over a network. It is a fundamental part of web development. The most common encoding is UTF-8. It is important to have a consistent encoding throughout your website to avoid problems with displaying text.

Encoding is the process of converting data into a format that can be transmitted over a network. It is a fundamental part of web development. The most common encoding is UTF-8. It is important to have a consistent encoding throughout your website to avoid problems with displaying text. Without a consistent encoding, the text on your website may appear garbled or incorrect. This is why it is important to choose an encoding and stick to it. UTF-8 is a good choice because it can represent all the characters in the world. It is also efficient, meaning it takes up less space than other encodings. This is why UTF-8 is the most widely used encoding on the web.
