Doctype

HTML-5 document type declaration is required for all web pages.

Doctype is required for all web pages. It tells the browser which version of HTML the page is written in. The most common doctype is HTML5, which is the latest version of the standard. It is important to use the correct doctype to ensure that your page displays correctly across different browsers.

W3C Validity

W3C Validator checks your code for errors.

W3C - World Wide Web Consortium is the main international standards organization for the World Wide Web. It develops and maintains standards for the web, such as HTML, CSS, and XML. Using the W3C Validator can help you ensure that your code is valid and follows the latest standards.

Character Encoding

UTF-8 is the most common character encoding for web pages.

Character encoding is a way of representing text in a format that can be stored and transmitted over the web. UTF-8 is a variable-length character encoding that can represent any character in the Unicode standard. It is the most widely used encoding for web pages.
