✔ **Doctype** Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in.

Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in. The most common doctype is HTML5. It is important to have a doctype to ensure that the browser renders the page correctly. Without a doctype, the browser will use a default doctype, which may not be the one you want. This can lead to rendering issues, especially with CSS and JavaScript. So, always include a doctype at the top of your HTML document.

● **W3C Validity** W3C Validity is a tool that checks if your HTML document is valid according to the W3C standards.

W3C - World Wide Web Consortium. It is an international community that develops and maintains standards for the World Wide Web. The W3C standards are used to ensure that web pages are consistent and interoperable. The W3C Validity tool is a free online service that checks if your HTML document is valid according to the W3C standards. It can help you identify and fix errors in your HTML code. This is important because a valid HTML document is more likely to be displayed correctly in all web browsers. So, it's a good idea to use the W3C Validity tool to check your HTML code regularly.

✔ **Charset** Charset is the character encoding used in the document. It tells the browser how to interpret the characters in the document.

Charset is the character encoding used in the document. It tells the browser how to interpret the characters in the document. The most common charset is UTF-8. It is important to have a charset to ensure that the browser displays the characters correctly. Without a charset, the browser will use a default charset, which may not be the one you want. This can lead to display issues, especially with non-ASCII characters. So, always include a charset at the top of your HTML document.
