✔ **Doctype** Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in.

Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in. The most common doctype is HTML5. It is important to have the correct doctype to ensure that the browser renders the page correctly. If you are using an older version of HTML, you should use the appropriate doctype for that version. For example, if you are using HTML4, you should use the HTML4 doctype. If you are using HTML5, you should use the HTML5 doctype. The HTML5 doctype is the simplest and most widely supported. It is also the most future-proof. So, if you are unsure, it is always best to use the HTML5 doctype.

● **W3C Validity** W3C Validity is a tool that checks if your HTML code is valid according to the W3C standards.

W3C - World Wide Web Consortium. It is an international community that develops and maintains standards for the World Wide Web. The W3C standards are the rules that govern how the web should work. They ensure that web pages are consistent and can be accessed by everyone. The W3C standards are divided into three main categories: HTML, CSS, and XML. HTML is the language used to create web pages. CSS is the language used to style web pages. XML is the language used to store and transport data. The W3C standards are constantly evolving. New standards are being developed all the time. This means that web developers need to keep up to date with the latest standards to ensure that their web pages are valid and can be accessed by everyone.

✔ **Encoding** Encoding is the process of converting text into a format that can be stored and transmitted. The most common encoding is UTF-8.

Encoding is the process of converting text into a format that can be stored and transmitted. The most common encoding is UTF-8. UTF-8 is a variable-length character encoding. It can represent any character in the Unicode standard. It is also the most widely supported encoding. So, if you are unsure, it is always best to use UTF-8. UTF-8 is also the most future-proof. It will be able to represent any character that is ever created. So, it is the best choice for any new web page.
