✔ **Doctype** Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in.

Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in. The most common doctype is HTML5. It is important to have a doctype to ensure that the browser renders the page correctly. Without a doctype, the browser will use a default doctype, which may not be the one you want. The doctype also affects the layout of the page. For example, the HTML5 doctype is more flexible than the HTML4 doctype. It allows for more variation in the way that elements are used. This is why it is important to have a doctype at the top of every HTML document.

● **W3C Validity** W3C is the World Wide Web Consortium. It is the main international standards organization for the World Wide Web. It develops and maintains the standards for HTML, CSS, and XML. It also provides a service for validating web pages against these standards.

W3C is the World Wide Web Consortium. It is the main international standards organization for the World Wide Web. It develops and maintains the standards for HTML, CSS, and XML. It also provides a service for validating web pages against these standards. The W3C validity checker is a tool that can be used to check if a web page is valid according to the W3C standards. It can be used to check the HTML, CSS, and XML of a web page. The checker will report any errors or warnings that it finds. This can be useful for ensuring that a web page is valid and that it will be rendered correctly by all browsers. It can also be used to identify areas where a web page can be improved. For example, the checker might point out that a certain element is not valid or that a certain attribute is not used correctly. This information can be used to make changes to the web page and to ensure that it is valid and that it will be rendered correctly by all browsers.

✔ **Charset** Charset is the character set used in the document. It is a set of characters that can be used in a document. The most common charset is UTF-8. It is important to have a charset to ensure that the document is rendered correctly. Without a charset, the browser will use a default charset, which may not be the one you want. The charset also affects the layout of the page. For example, the UTF-8 charset is more flexible than the ASCII charset. It allows for more variation in the way that characters are used. This is why it is important to have a charset at the top of every HTML document.

Charset is the character set used in the document. It is a set of characters that can be used in a document. The most common charset is UTF-8. It is important to have a charset to ensure that the document is rendered correctly. Without a charset, the browser will use a default charset, which may not be the one you want. The charset also affects the layout of the page. For example, the UTF-8 charset is more flexible than the ASCII charset. It allows for more variation in the way that characters are used.
