✔ **Doctype** Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in.

Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in. The most common doctype is HTML5. It is important to have a doctype because it affects the rendering of the page. Without a doctype, the browser will use a default doctype, which may not be the one you want. The doctype also affects the validation of the document. A valid doctype is required for a document to be considered valid by the W3C validator.

● **W3C Validity** W3C Validity is a tool that checks if your HTML document is valid according to the W3C standards.

W3C - World Wide Web Consortium. It is an international community that develops and maintains standards for the World Wide Web. The W3C standards are used to ensure that web pages are consistent and interoperable. The W3C standards are used by web browsers to render web pages. The W3C standards are used by web developers to create web pages. The W3C standards are used by web designers to design web pages. The W3C standards are used by web publishers to publish web pages. The W3C standards are used by web users to use web pages.

✔ **Encoding** Encoding is the process of converting text into a format that can be stored or transmitted. The most common encoding is UTF-8.

Encoding is the process of converting text into a format that can be stored or transmitted. The most common encoding is UTF-8. It is important to have a consistent encoding throughout the document. If the encoding is not consistent, the browser will not be able to read the document correctly. The encoding also affects the validation of the document. A valid encoding is required for a document to be considered valid by the W3C validator.
