✓ **Flash** `<embed src="..." type="application/x-shockwave-flash" data-bbox="0 0 0 0">`

Flash is a software platform for creating interactive content. It is used to create rich internet applications (RIAs) and animations. Flash content is typically delivered as a single file (SWF) that is embedded in a web page. Flash is supported by most major web browsers, but it is not supported by all mobile devices and operating systems. Flash is also not supported by search engines like Google. Therefore, it is recommended to use alternative technologies like HTML5 and CSS3 for creating interactive content.

✓ **Iframe** `<iframe src="...">`

An iframe is an HTML element that allows you to embed another document inside the current document. It is used to embed content from other websites, such as images, videos, and social media widgets. Iframes are useful for creating a more dynamic and interactive user interface. However, iframes can also be used to load malicious content, so it is important to be cautious when using them. Additionally, iframes can be used to bypass security measures like Content Security Policy (CSP).
