✔ **Doctype** Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in.

Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in. The most common doctype is HTML5. It is important to have the correct doctype to ensure that the browser renders the page correctly. If you are using an older version of HTML, you should use the appropriate doctype for that version. For example, if you are using HTML4, you should use the HTML4 doctype. If you are using HTML5, you should use the HTML5 doctype. The HTML5 doctype is the simplest and most widely supported. It is also the most future-proof. Therefore, it is recommended to use the HTML5 doctype for all new websites.

● **W3C Validity** W3C Validity is a tool that checks if your HTML code is valid according to the W3C standards.

W3C - World Wide Web Consortium. It is an international community that develops and maintains standards for the World Wide Web. The W3C standards are the rules that govern how the web should work. They ensure that all web pages are compatible with all web browsers. The W3C standards are also the basis for many other web technologies, such as CSS and JavaScript. Therefore, it is important to follow the W3C standards when developing a website. This ensures that your website will work correctly on all browsers and devices. The W3C Validity tool is a useful resource for checking if your HTML code is valid. It can help you identify and fix any errors in your code. This ensures that your website is compliant with the W3C standards and will work correctly on all browsers and devices.

✔ **Charset** Charset is the character set used in the document. It tells the browser which characters are allowed in the document.

Charset is the character set used in the document. It tells the browser which characters are allowed in the document. The most common charset is UTF-8. It is a variable-length character set that can represent any character in the Unicode standard. UTF-8 is also the most widely supported charset. Therefore, it is recommended to use UTF-8 for all new websites. The Charset meta tag is used to declare the charset of the document. It is placed in the head of the HTML document. The browser then uses this information to render the page correctly. If you do not declare the charset, the browser will assume a default charset. This can lead to rendering issues, especially if the document contains characters from a different charset. Therefore, it is important to declare the charset of the document using the Charset meta tag.
