✔ **Doctype** Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in.

Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in. The most common doctype is HTML5. It is important to have the correct doctype to ensure that the browser renders the page correctly. If you are using an older version of HTML, you should use the appropriate doctype for that version. For example, if you are using HTML4, you should use the HTML4 doctype. If you are using HTML5, you should use the HTML5 doctype. The HTML5 doctype is the simplest and most widely supported. It is also the most future-proof. It is recommended to use the HTML5 doctype for all new websites.

● **W3C Validity** W3C is the World Wide Web Consortium. It is the main international standards organization for the World Wide Web. It develops and maintains the standards for HTML, CSS, and XML. It also provides validation services to ensure that websites conform to these standards.

W3C - World Wide Web Consortium. It is the main international standards organization for the World Wide Web. It develops and maintains the standards for HTML, CSS, and XML. It also provides validation services to ensure that websites conform to these standards. The W3C website is a valuable resource for web developers. It provides a wealth of information about the latest web standards and best practices. It also offers a variety of tools and services to help developers create better websites. One of the most useful tools is the W3C Validator. This tool checks your code for errors and provides suggestions for how to fix them. It is a great way to ensure that your website is compliant with the latest standards and is easy to use and understand.

✔ **Charset** Charset is the character set used in the document. It defines the mapping between the bytes in the document and the characters that they represent. The most common charset is UTF-8. It is important to specify the charset in the document to ensure that the characters are displayed correctly.

Charset is the character set used in the document. It defines the mapping between the bytes in the document and the characters that they represent. The most common charset is UTF-8. It is important to specify the charset in the document to ensure that the characters are displayed correctly. If you do not specify the charset, the browser will assume a default charset. This can lead to problems if the default charset is not the one you intended to use. For example, if you are using a non-ASCII character set and the browser assumes a different charset, the characters will be displayed incorrectly. To avoid this, it is best to always specify the charset in the document. This ensures that the characters are displayed correctly, regardless of the browser or the operating system.
