✔ **Doctype** Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in.

Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in. The most common doctype is HTML5. It is important to have the correct doctype to ensure that the browser renders the page correctly. If you are using an older version of HTML, you should use the appropriate doctype for that version. For example, if you are using HTML4, you should use the HTML4 doctype. If you are using HTML5, you should use the HTML5 doctype. The HTML5 doctype is the simplest and most widely supported. It is also the most future-proof. Therefore, it is recommended to use the HTML5 doctype for all new websites.

● **W3C Validity** W3C Validity is a tool that checks if your HTML code is valid according to the W3C standards.

W3C - World Wide Web Consortium. It is an international community that develops and maintains standards for the World Wide Web. The W3C standards are the rules that govern how web pages are created and how they are displayed in a web browser. The W3C standards are designed to ensure that web pages are accessible to all users, regardless of the device or browser they are using. The W3C standards are also designed to ensure that web pages are easy to create and maintain. The W3C standards are the foundation of the World Wide Web. Without the W3C standards, the World Wide Web would not be possible. Therefore, it is important to follow the W3C standards when creating web pages. The W3C Validity tool is a useful resource for checking if your HTML code is valid according to the W3C standards. It can help you identify any errors in your code and provide suggestions for how to fix them. This can help you ensure that your web pages are valid and accessible to all users.

✔ **Charset** Charset is the character set used in the document. It defines the mapping between the bytes in the document and the characters that they represent.

Charset is the character set used in the document. It defines the mapping between the bytes in the document and the characters that they represent. The most common charset is UTF-8. It is a variable-length character set that can represent any character in the Unicode standard. UTF-8 is also the most widely supported charset. Therefore, it is recommended to use UTF-8 for all new websites. The Charset meta-tag is used to declare the charset used in the document. It is placed in the head of the HTML document. The Charset meta-tag tells the browser which charset to use when rendering the page. If the browser does not know the charset, it will assume the default charset, which is usually UTF-8. However, if you are using a different charset, you should declare it in the Charset meta-tag to ensure that the browser renders the page correctly.
