✔ **Doctype** Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in.

Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in. The most common doctype is HTML5. It is important to have the correct doctype to ensure that the browser renders the page correctly. If you are using an older version of HTML, you should use the appropriate doctype for that version. For example, if you are using HTML4, you should use the HTML4 doctype. If you are using HTML5, you should use the HTML5 doctype. The HTML5 doctype is the simplest and most widely supported. It is also the most future-proof. Therefore, it is recommended to use the HTML5 doctype for all new websites.

● **W3C Validity** W3C Validity is a tool that checks if your HTML code is valid according to the W3C standards.

W3C - World Wide Web Consortium. It is an international community that develops and maintains standards for the World Wide Web. The W3C standards are the rules that govern how the web should work. They ensure that all web pages are compatible with all web browsers. The W3C standards are also the basis for many other web technologies, such as CSS and JavaScript. Therefore, it is important to follow the W3C standards when creating web pages. The W3C Validity tool is a free online tool that checks if your HTML code is valid according to the W3C standards. It is a useful tool for developers and designers. It can help you identify errors in your code and provide suggestions for how to fix them. Therefore, it is recommended to use the W3C Validity tool to check your HTML code regularly.

✔ **Charset** Charset is the character set used in the document. It defines the mapping between the bytes in the document and the characters that they represent.

Charset is the character set used in the document. It defines the mapping between the bytes in the document and the characters that they represent. The most common charset is UTF-8. It is a variable-length character set that can represent any character in the Unicode standard. UTF-8 is also the most widely supported charset. Therefore, it is recommended to use UTF-8 for all new websites. The Charset meta-tag is used to declare the charset used in the document. It is placed in the head of the HTML document. The correct charset should be declared to ensure that the browser renders the page correctly. If the charset is not declared correctly, the browser may use a default charset, which may not be the correct one. Therefore, it is important to declare the correct charset in the meta-tag.
