✔ **Doctype** Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in.

Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in. The most common doctype is HTML5. It is important to have a doctype to ensure that the browser renders the page correctly. Without a doctype, the browser will use a default doctype, which may not be the one you want. The doctype also affects the layout of the page. For example, the HTML5 doctype is more flexible than the HTML4 doctype. It allows for more variation in the way that elements are used. This is why it is important to have a doctype at the top of every HTML document.

● **W3C Validity** W3C Validity is a tool that checks if your HTML code is valid according to the W3C standards.

W3C - World Wide Web Consortium. It is an international community that develops and maintains standards for the World Wide Web. The W3C standards are the rules that govern how web pages are created and how they are displayed. The W3C standards are important because they ensure that web pages are consistent and easy to use. Without the W3C standards, the web would be a chaotic place. The W3C standards are also important because they help to ensure that web pages are accessible to everyone. This is why it is important to check if your HTML code is valid according to the W3C standards. The W3C Validity tool is a great way to do this. It will tell you if there are any errors in your code and what you need to do to fix them.

✔ **Charset** Charset is the character set used in the document. It tells the browser which characters are allowed in the document.

Charset is the character set used in the document. It tells the browser which characters are allowed in the document. The most common charset is UTF-8. It is important to have a charset to ensure that the browser renders the page correctly. Without a charset, the browser will use a default charset, which may not be the one you want. The charset also affects the layout of the page. For example, the UTF-8 charset is more flexible than the ASCII charset. It allows for more variation in the way that characters are used. This is why it is important to have a charset at the top of every HTML document.
