✔ **Doctype** Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in.

Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in. The most common doctype is HTML5. It is important to have the correct doctype to ensure that the browser renders the page correctly. If you are using an older version of HTML, you should use the appropriate doctype for that version. For example, if you are using HTML4, you should use the HTML4 doctype. If you are using HTML5, you should use the HTML5 doctype. The HTML5 doctype is the simplest and most widely supported. It is also the most future-proof. Therefore, it is recommended to use the HTML5 doctype for all new websites.

● **W3C Validity** W3C Validity is a tool that checks if your HTML code is valid according to the W3C standards.

W3C - World Wide Web Consortium. It is an international community of developers of Internet-based technologies that has developed the standards that govern the World Wide Web. The W3C standards are the foundation of the Web. They ensure that the Web is accessible to everyone, regardless of the device or browser they are using. The W3C standards are also the foundation of the Web's security and privacy. They ensure that the Web is a safe place to use. Therefore, it is important to ensure that your HTML code is valid according to the W3C standards. This can be done by using a W3C Validity checker. This tool will check your code for any errors and provide you with a list of the errors. You can then use this list to fix the errors and ensure that your code is valid.

✔ **Charset** Charset is the character encoding used in the document. It tells the browser how to interpret the characters in the document.

Charset is the character encoding used in the document. It tells the browser how to interpret the characters in the document. The most common charset is UTF-8. It is a variable-length character encoding that can represent any character in the Unicode standard. It is also the most widely supported. Therefore, it is recommended to use UTF-8 for all new websites. It is important to have the correct charset to ensure that the browser renders the page correctly. If you are using an older version of HTML, you should use the appropriate charset for that version. For example, if you are using HTML4, you should use the HTML4 charset. If you are using HTML5, you should use the HTML5 charset. The HTML5 charset is the simplest and most widely supported. It is also the most future-proof. Therefore, it is recommended to use the HTML5 charset for all new websites.
