✔ **Doctype** Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in.

Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in. The most common doctype is HTML5. It is important to have the correct doctype to ensure that the browser renders the page correctly. If you are using an older version of HTML, you should use the appropriate doctype for that version. For example, if you are using HTML4, you should use the HTML4 doctype. If you are using HTML5, you should use the HTML5 doctype. The HTML5 doctype is the most modern and recommended doctype. It is also the simplest to use. It consists of a single line of code: `<!DOCTYPE html>`. This line should be placed at the very beginning of the HTML document, before any other code. It is important to note that the doctype is case-insensitive. This means that you can use `<!DOCTYPE html>`, `<!doctype html>`, or `<!Doctype html>` and the browser will still recognize it. However, it is best to use the standard format: `<!DOCTYPE html>`. The doctype is also important for CSS and JavaScript. Some CSS and JavaScript files are only compatible with certain versions of HTML. If you use the wrong doctype, these files may not work correctly. Therefore, it is always a good idea to use the correct doctype for your document.

● **W3C Validity** W3C Validity is a tool that checks if your HTML code is valid according to the W3C standards.

W3C - World Wide Web Consortium. It is an international community that develops and maintains standards for the World Wide Web. The W3C standards are the rules that govern how web pages are created and how they are displayed. These standards are important for ensuring that web pages are consistent and easy to use. The W3C standards are also important for ensuring that web pages are accessible to all users, including those with disabilities. The W3C standards are developed through a process of consensus. This means that all members of the W3C community must agree on the standards. This process ensures that the standards are fair and unbiased. The W3C standards are also updated regularly to keep pace with the latest technology. This ensures that the standards remain relevant and useful. The W3C standards are the foundation of the World Wide Web. Without them, the web would be a chaotic and unusable place. Therefore, it is important to follow the W3C standards when creating web pages. This will ensure that your pages are consistent, easy to use, and accessible to all users.

✔ **Charset** Charset is the character set used in the document. It defines the mapping between the bytes in the document and the characters that they represent.

Charset is the character set used in the document. It defines the mapping between the bytes in the document and the characters that they represent. The most common charset is UTF-8. It is a variable-length character set that can represent any character in the Unicode standard. UTF-8 is also the most efficient character set for web pages. It uses the fewest bytes possible to represent each character. This makes web pages load faster and use less bandwidth. Therefore, it is always a good idea to use UTF-8 as the charset for your web pages. This will ensure that your pages are accessible to all users and load quickly. The charset is also important for ensuring that the text in your document is displayed correctly. If you use the wrong charset, the text may appear as gibberish or be missing entirely. Therefore, it is important to specify the charset in the document. This can be done using the `<meta>` tag. For example, to specify UTF-8 as the charset, you would use the following code: `<meta charset="UTF-8">`. This code should be placed at the very beginning of the HTML document, before any other code. It is important to note that the charset is case-sensitive. This means that you must use the correct case for the charset name. For example, `UTF-8` is correct, but `utf-8` is not. Therefore, it is important to be careful when specifying the charset in the document.
