✔ **Doctype** Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in.

Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in. The most common doctype is HTML5. It is important to have a doctype to ensure that the browser renders the page correctly. Without a doctype, the browser will use a default doctype, which may not be the one you want. The doctype is written as a line of text at the top of the HTML file. It starts with the word 'doctype' followed by the name of the HTML version in quotes. For example, the HTML5 doctype is written as: `<!doctype html>`

● **W3C Validity** W3C is the World Wide Web Consortium. It is an international community that develops and maintains standards for the World Wide Web.

W3C is the World Wide Web Consortium. It is an international community that develops and maintains standards for the World Wide Web. The W3C standards are used to ensure that web pages are consistent and can be accessed by all users. The W3C standards are written in a language called XML. XML is a markup language that is used to store and transport data. It is a simple, self-describing language that is easy to learn and use. The W3C standards are used to create web pages that are accessible to all users, regardless of the device or browser they are using. The W3C standards are also used to create web pages that are easy to search and navigate. The W3C standards are the foundation of the World Wide Web.

✔ **Encoding** Encoding is the process of converting data into a format that can be stored or transmitted. It is a way of representing data in a binary format.

Encoding is the process of converting data into a format that can be stored or transmitted. It is a way of representing data in a binary format. The most common encoding is UTF-8. UTF-8 is a variable-length character encoding that can represent any character in the Unicode standard. It is the most widely used encoding on the web. UTF-8 is also the default encoding for most web browsers. It is important to use the correct encoding to ensure that your web pages are displayed correctly. If you use the wrong encoding, your web pages may appear garbled or contain strange characters. The encoding is written in the HTML document as a meta tag. For example, the UTF-8 encoding is written as: `<meta charset='UTF-8'>`
