✔ **Doctype** Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in.

Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in. The most common doctype is HTML5. It is important to have a doctype to ensure that the browser renders the page correctly. Without a doctype, the browser will use a default doctype, which may not be the one you want. The doctype also affects the layout of the page. For example, the HTML5 doctype is more flexible than the HTML4 doctype. It allows for more variation in the way that elements are used. This is why it is important to have a doctype at the beginning of every HTML document.

● **W3C Validity** W3C Validity is a tool that checks if your HTML code is valid according to the W3C standards.

W3C - World Wide Web Consortium. It is an international community that develops and maintains standards for the World Wide Web. The W3C standards are used to ensure that web pages are consistent and can be accessed by all users. The W3C Validity tool is a free online service that checks if your HTML code is valid according to the W3C standards. It is a useful tool for web developers to ensure that their code is correct and that their web pages will be displayed correctly in all browsers. The W3C Validity tool also provides information about the errors in the code and how to fix them. This is a very helpful tool for anyone who is developing web pages.

✔ **Charset** Charset is the character set used in the document. It is usually UTF-8, which is the most common character set for web pages.

Charset is the character set used in the document. It is usually UTF-8, which is the most common character set for web pages. The charset is declared in the HTML document using the charset attribute. This attribute tells the browser which character set the document is written in. Without a charset declaration, the browser will use a default character set, which may not be the one you want. The charset also affects the way that characters are displayed on the page. For example, the UTF-8 character set can display a wide range of characters, including those from different languages. This is why it is important to have a charset declaration at the beginning of every HTML document.
