✔ **Doctype** Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in.

Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in. The most common doctype is HTML5. It is important to have the correct doctype to ensure that the browser renders the page correctly. If you are using an older version of HTML, you should use the appropriate doctype for that version. For example, if you are using HTML4, you should use the HTML4 doctype. If you are using HTML5, you should use the HTML5 doctype. The HTML5 doctype is the simplest and most widely supported. It is also the most future-proof. So, if you are unsure, it is always best to use the HTML5 doctype.

● **W3C Validity** W3C Validity is a tool that checks if your HTML code is valid according to the W3C standards.

W3C - World Wide Web Consortium. It is an international community that develops and maintains standards for the World Wide Web. The W3C standards are the rules that govern how web pages are created and how they are displayed in a browser. If your HTML code is not valid, it means that it does not follow the W3C standards. This can cause problems with the way your page is displayed in different browsers. It can also make it harder for search engines to find your page. So, it is important to make sure that your HTML code is valid. You can use the W3C Validity tool to check if your code is valid. If it is not, the tool will tell you what is wrong and how to fix it. This will help you to create a web page that is valid and follows the W3C standards.

✔ **Charset** Charset is the character set used in the document. It tells the browser which characters are allowed in the document.

Charset is the character set used in the document. It tells the browser which characters are allowed in the document. The most common charset is UTF-8. It is a variable-length character set that can represent any character in any language. It is also the most widely supported. So, it is always best to use UTF-8 as the charset for your document. You can specify the charset in the HTML document using the charset attribute. For example, you can use the following code to specify UTF-8 as the charset: `<meta charset="UTF-8">`
