✔ **Doctype** Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in.

Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in. The most common doctype is HTML5. It is important to have the correct doctype to ensure that the browser renders the page correctly. If you are using an older version of HTML, you should use the appropriate doctype for that version. For example, if you are using HTML4, you should use the HTML4 doctype. If you are using HTML5, you should use the HTML5 doctype. The HTML5 doctype is the simplest and most widely supported. It is also the most future-proof. So, if you are writing a new HTML document, you should always use the HTML5 doctype.

● **W3C Validity** W3C Validity is a tool that checks if your HTML document is valid according to the W3C standards.

W3C - World Wide Web Consortium. It is an international community that develops and maintains standards for the World Wide Web. The W3C standards are the rules that govern how the web should work. They ensure that web pages are consistent and can be accessed by everyone. The W3C standards are divided into three main categories: HTML, CSS, and XML. HTML is the language used to create web pages. CSS is the language used to style web pages. XML is the language used to store and transport data. The W3C standards are constantly evolving. New standards are being developed all the time. This ensures that the web remains a dynamic and growing environment. It also ensures that web pages remain accessible and usable for years to come. So, it is important to follow the W3C standards when creating web pages. This will ensure that your pages are valid and can be accessed by everyone.

✔ **Charset** Charset is the character set used in the document. It defines the mapping between the bytes in the document and the characters that they represent.

Charset is the character set used in the document. It defines the mapping between the bytes in the document and the characters that they represent. The most common charset is UTF-8. It is a variable-length character set that can represent any character in the Unicode standard. UTF-8 is also the most widely supported charset. So, it is important to use UTF-8 as the charset for your HTML document. This will ensure that your document can be displayed correctly on all browsers. It will also ensure that your document can be accessed by everyone. So, always use UTF-8 as the charset for your HTML document.
