✔ **Doctype** Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in.

Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in. The most common doctype is HTML5. It is important to have a doctype because it affects the rendering of the page. Without a doctype, the browser will use a default doctype, which may not be the one you want. The doctype is written as a line of text at the top of the HTML file. It starts with <!DOCTYPE and ends with >. The version of HTML is written in the middle. For example, <!DOCTYPE html> is the doctype for HTML5. There are also doctypes for HTML4 and XHTML. The doctype is case-insensitive, so <!doctype html> is also valid. It is a good practice to always include a doctype at the top of your HTML files.

● **W3C Validity** W3C Validity is a tool that checks if your HTML code is valid according to the W3C standards.

W3C - World Wide Web Consortium. It is an international community that develops standards for the World Wide Web. The W3C standards are used to ensure that web pages are consistent and can be accessed by all users. The W3C Validity tool is a free online service that checks if your HTML code is valid according to the W3C standards. It can check for errors in the HTML code, such as missing tags or incorrect attributes. It can also check for errors in the CSS code. The tool will provide a list of errors and suggestions for how to fix them. It is a useful tool for web developers to ensure that their code is valid and follows the W3C standards.

✔ **Charset** Charset is the character set used in the document. It tells the browser which encoding to use to display the text.

Charset is the character set used in the document. It tells the browser which encoding to use to display the text. The most common charset is UTF-8. It is important to have a charset because it affects how the text is displayed. Without a charset, the browser will use a default charset, which may not be the one you want. The charset is written as a line of text in the HTML document. It starts with <meta charset= and ends with >. The name of the charset is written in the middle. For example, <meta charset= UTF-8> is the charset for UTF-8. There are many other charsets, such as ISO-8859-1 and Windows-1252. The charset is case-insensitive, so <meta charset= utf-8> is also valid. It is a good practice to always include a charset in your HTML documents.
