✔ **Doctype** Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in.

Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in. The most common doctype is HTML5. It is important to have a doctype to ensure that the browser renders the page correctly. Without a doctype, the browser will use a default doctype, which may not be the one you want. The doctype also affects the layout of the page. For example, the HTML5 doctype is more flexible than the HTML4 doctype. It allows for more variation in the way that elements are used. This is why it is important to have a doctype at the beginning of every HTML document.

● **W3C Validity** W3C is the World Wide Web Consortium. It is the main international standards organization for the World Wide Web. It develops and maintains the standards for HTML, CSS, and XML. It also provides tools and resources for developers to ensure that their code is valid and conforms to the standards.

W3C is the World Wide Web Consortium. It is the main international standards organization for the World Wide Web. It develops and maintains the standards for HTML, CSS, and XML. It also provides tools and resources for developers to ensure that their code is valid and conforms to the standards. The W3C website is a valuable resource for anyone who is interested in web development. It provides a wealth of information about the latest standards and best practices. It also offers a variety of tools and resources that can help developers to create better websites. The W3C is committed to making the web a better place for everyone. It works to ensure that the web is accessible to all people, regardless of their abilities or disabilities. It also works to promote the use of open standards and technologies. The W3C is a non-profit organization, and its mission is to serve the interests of the web community as a whole.

✔ **Charset** Charset is the character set used in the document. It defines the mapping between the bytes in the document and the characters that they represent. The most common charset is UTF-8. It is important to specify the charset in the document to ensure that the characters are displayed correctly. Without a charset, the browser will use a default charset, which may not be the one you want. The charset also affects the way that the document is stored and transmitted. It is important to use a charset that is compatible with the browser and the network.

Charset is the character set used in the document. It defines the mapping between the bytes in the document and the characters that they represent. The most common charset is UTF-8. It is important to specify the charset in the document to ensure that the characters are displayed correctly. Without a charset, the browser will use a default charset, which may not be the one you want. The charset also affects the way that the document is stored and transmitted. It is important to use a charset that is compatible with the browser and the network. The charset is specified in the document using a meta tag. This tag tells the browser which charset to use when displaying the document. It is important to use the correct charset to avoid any issues with the display of the document. The charset is also important for the way that the document is stored and transmitted. It is important to use a charset that is compatible with the browser and the network.
