✔ **Doctype** Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in.

Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in. The most common doctype is HTML5. It is important to have a doctype because it affects the rendering of the page. Without a doctype, the browser will use a default doctype, which may not be the one you want. The doctype also affects the validation of the document. A valid doctype is required for a document to be considered valid.

● **W3C Validity** W3C Validity is a tool that checks if your HTML document is valid according to the W3C standards.

W3C - World Wide Web Consortium. It is an international community that develops and maintains standards for the World Wide Web. The W3C standards are the foundation of the web. They ensure that web pages are consistent and can be accessed by everyone. The W3C standards are also used to validate web pages. A valid web page is one that follows the W3C standards. The W3C Validity tool is a free online tool that checks if your HTML document is valid according to the W3C standards. It is a useful tool for web developers.

✔ **Charset** Charset is the character set used in the document. It tells the browser how to interpret the characters in the document.

Charset is the character set used in the document. It tells the browser how to interpret the characters in the document. The most common charset is UTF-8. It is important to have a charset because it affects the rendering of the page. Without a charset, the browser will use a default charset, which may not be the one you want. The charset also affects the validation of the document. A valid charset is required for a document to be considered valid.
