Doctype

HTML-5 document type declaration is required for all web pages. It tells the browser which version of HTML the page is written in. Without a doctype, the browser will use a fallback version, which may not support all the features you need.

Doctype is a declaration of the HTML version used in the document. It is placed at the beginning of the HTML file, before the `<html>` tag. The most common doctype is `<!DOCTYPE html>`, which is used for HTML5 documents. Other doctypes include `<!DOCTYPE html PUBLIC "-//W3C//DTD HTML 4.01//EN" "http://www.w3.org/TR/html4/strict.dtd">` for HTML4.01 Strict, and `<!DOCTYPE html PUBLIC "-//W3C//DTD HTML 4.01 Transitional//EN" "http://www.w3.org/TR/html4/strict.dtd">` for HTML4.01 Transitional.

W3C Validity

W3C is the World Wide Web Consortium, which is responsible for the development and maintenance of the standards that govern the World Wide Web.

W3C - World Wide Web Consortium is the main international standards organization for the World Wide Web. It is responsible for the development and maintenance of the standards that govern the World Wide Web, including the HTML, CSS, and XML specifications. W3C also provides a variety of tools and services to help web developers create valid and accessible web pages.

Character Encoding

Character encoding is a way of representing text in a computer system. It is used to convert the characters in a document into a sequence of bytes that can be stored and transmitted. The most common character encoding is UTF-8, which is used for almost all web pages.

Character encoding is a way of representing text in a computer system. It is used to convert the characters in a document into a sequence of bytes that can be stored and transmitted. The most common character encoding is UTF-8, which is used for almost all web pages.
