The following table shows the search volume for the keywords listed above. The data is based on the search volume index (SVI) and is not absolute. The SVI is a relative measure of the search volume of a keyword, based on the search volume of a specific keyword in a specific region. The SVI is calculated by dividing the search volume of a keyword by the search volume of a specific keyword in a specific region. The SVI is then multiplied by 100 to get the search volume index. The search volume index is a relative measure of the search volume of a keyword, based on the search volume of a specific keyword in a specific region. The search volume index is calculated by dividing the search volume of a keyword by the search volume of a specific keyword in a specific region. The search volume index is then multiplied by 100 to get the search volume index. The search volume index is a relative measure of the search volume of a keyword, based on the search volume of a specific keyword in a specific region. The search volume index is calculated by dividing the search volume of a keyword by the search volume of a specific keyword in a specific region. The search volume index is then multiplied by 100 to get the search volume index.

✓ **Flash** `<embed src="..." type="application/x-shockwave-flash" data-...>`

Flash is a software platform for creating interactive content. It is used to create rich internet applications (RIAs) and animations. Flash content is typically delivered as a single file (SWF) that is embedded in a web page. Flash is supported by most major web browsers, but it is not supported by all mobile devices and operating systems. Flash is also not supported by search engines like Google and Bing. Therefore, it is recommended to use alternative technologies like HTML5 and CSS3 for creating interactive content.

✓ **Iframe** `<iframe src="...">`

An iframe is an HTML element that allows you to embed another document inside the current document. It is used to embed content from other websites, such as images, videos, and social media widgets. Iframes are useful for creating a more integrated and user-friendly interface. However, iframes can also be used to load malicious content, so it is important to be cautious when using them. Additionally, iframes can be used to bypass security measures like Content Security Policy (CSP) and Same-Origin Policy (SOP). Therefore, it is recommended to use iframes only when necessary and to implement proper security measures.
