✔ **Doctype** Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in.

Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in. The most common doctype is HTML5. It is important to have the correct doctype to ensure that the browser renders the page correctly. If you are using an older version of HTML, you should use the appropriate doctype for that version. For example, if you are using HTML4, you should use the HTML4 doctype. If you are using HTML5, you should use the HTML5 doctype. The HTML5 doctype is the simplest and most widely supported. It is also the most future-proof. It is recommended to use the HTML5 doctype for all new websites.

● **W3C Validity** W3C Validity is a tool that checks if your HTML code is valid according to the W3C standards.

W3C - World Wide Web Consortium. It is an international community that develops and maintains standards for the World Wide Web. The W3C standards are the foundation of the web. They ensure that web pages are consistent and interoperable. The W3C standards are developed through a process of consensus. They are designed to be flexible and adaptable to future changes. The W3C standards are the result of the collaboration of many experts in the field of web technology. They are the best way to ensure that your web pages are compatible with all browsers and devices. It is important to follow the W3C standards to ensure that your website is accessible to all users. The W3C standards are the foundation of the web. They ensure that web pages are consistent and interoperable. The W3C standards are developed through a process of consensus. They are designed to be flexible and adaptable to future changes. The W3C standards are the result of the collaboration of many experts in the field of web technology. They are the best way to ensure that your web pages are compatible with all browsers and devices. It is important to follow the W3C standards to ensure that your website is accessible to all users.

✔ **Charset** Charset is the character encoding used in the document. It tells the browser how to interpret the characters in the document.

Charset is the character encoding used in the document. It tells the browser how to interpret the characters in the document. The most common charset is UTF-8. It is a variable-length character encoding that can represent any character in the Unicode standard. UTF-8 is the most widely used character encoding on the web. It is also the most future-proof. It is recommended to use UTF-8 for all new websites. The charset is declared in the HTML document using the charset attribute. It is important to have the correct charset to ensure that the browser renders the page correctly. If you are using UTF-8, you should use the UTF-8 charset. If you are using a different character encoding, you should use the appropriate charset for that encoding. The charset is the foundation of the web. It ensures that web pages are consistent and interoperable. The charset is developed through a process of consensus. It is designed to be flexible and adaptable to future changes. The charset is the result of the collaboration of many experts in the field of web technology. It is the best way to ensure that your web pages are compatible with all browsers and devices. It is important to follow the charset standards to ensure that your website is accessible to all users.
