✘ **Flash** `` `<object classid="clsid:D27CDB6E-AE6D-11cf-864E-00AA005A4548" data-bbox="0 0 0 0" style="display:none"><param name="movie" value="..." /><param name="flashvars" value="..." /></object>`

Flash is a software platform for creating and displaying rich Internet applications (RIAs) that can run within a web browser. It is developed by Adobe Systems. Flash content is typically created using Adobe Flash Professional, which exports the content as SWF files. These files are then embedded into web pages using either the `` tag or the `<object>` tag. The `<object>` tag is preferred for better control over the content's appearance and behavior. The `flashvars` parameter is used to pass data to the SWF file. For example, `<object classid="clsid:D27CDB6E-AE6D-11cf-864E-00AA005A4548" data-bbox="0 0 0 0" style="display:none"><param name="movie" value="movie.swf" /><param name="flashvars" value="var1=1&var2=2" /></object>` would pass `var1=1` and `var2=2` to the `movie.swf` file.

✘ **Iframe** `<iframe src="..." />`

An `<iframe>` tag is used to embed another document within the current document. The document being embedded can be a local file or a remote file. The `src` attribute is used to specify the source of the document. For example, `<iframe src="http://www.example.com/remote.html" />` would embed the document located at `http://www.example.com/remote.html`. The `width` and `height` attributes are used to specify the dimensions of the iframe. For example, `<iframe src="http://www.example.com/remote.html" width="100%" height="100%" />` would embed the document with a width of 100% and a height of 100%. The `allowtransparency` attribute is used to allow the iframe to be transparent. For example, `<iframe src="http://www.example.com/remote.html" width="100%" height="100%" allowtransparency="true" />` would allow the iframe to be transparent. The `frameborder` attribute is used to specify whether or not the iframe has a border. For example, `<iframe src="http://www.example.com/remote.html" width="100%" height="100%" frameborder="1" />` would give the iframe a border.

1. **SEO** - Search Engine Optimization. It's a process of making your website more visible to search engines like Google, Bing, and Yahoo.

2. **Content Marketing** - Creating and distributing valuable, relevant, and consistent content to attract and retain a clearly defined audience.

3. **Link Building** - The process of getting other websites to link back to your website, which helps improve your search engine ranking.

4. **Local SEO** - Optimizing your website to appear in local search results for businesses and services in your area.

5. **Mobile SEO** - Optimizing your website for mobile devices, as more people are using smartphones and tablets to browse the internet.
