 Doctype Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in.

Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in. The most common doctype is HTML5. It is important to have a doctype because it affects the rendering of the page. Without a doctype, the browser will use a default doctype, which may not be the one you want. The doctype also affects the validation of the document. A valid doctype is required for a document to be considered valid.

 W3C Validity W3C Validity is a service that checks if your HTML document is valid according to the W3C standards.

W3C - World Wide Web Consortium. It is an international community that develops and maintains standards for the World Wide Web. The W3C standards are used to ensure that web pages are consistent and can be accessed by all users. The W3C Validity service is a tool that checks if your HTML document is valid according to the W3C standards. It is important to have a valid HTML document because it ensures that your web page is consistent and can be accessed by all users. The W3C Validity service is a free service that you can use to check your HTML document.

 HTML Errors HTML Errors are mistakes in your HTML code that can cause problems with the rendering of your web page.

HTML Errors are mistakes in your HTML code that can cause problems with the rendering of your web page. There are many different types of HTML errors, but the most common ones are missing closing tags, unclosed elements, and invalid attributes. It is important to fix these errors because they can cause your web page to look broken or not work properly. The W3C Validity service can help you find and fix these errors.
