✔ **Doctype** Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in.

Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in. The most common doctype is HTML5. It is important to have the correct doctype to ensure that the browser renders the page correctly. If you are using an older version of HTML, you should use the appropriate doctype for that version. For example, if you are using HTML4, you should use the HTML4 doctype. If you are using HTML5, you should use the HTML5 doctype. The HTML5 doctype is the simplest and most widely supported. It is also the most future-proof. Therefore, it is recommended to use the HTML5 doctype for all new websites.

● **W3C Validity** W3C Validity is a tool that checks if your HTML code is valid according to the W3C standards.

W3C - World Wide Web Consortium. It is an international community of developers of Internet-based technologies that aims to develop standards for the World Wide Web. The W3C standards are the foundation of the Web. They ensure that web pages are accessible and interoperable. The W3C standards are developed through a process of consensus. This means that all members of the W3C community have a say in the development of the standards. The W3C standards are also updated regularly to keep pace with the latest technologies. This ensures that the Web remains a dynamic and evolving platform. The W3C standards are also widely adopted by web developers and browsers. This ensures that web pages created according to the standards will work correctly in all major browsers. Therefore, it is important to ensure that your HTML code is valid according to the W3C standards. This can be done using the W3C Validity tool. The tool will check your code against the W3C standards and report any errors. You can then use this information to correct the errors and ensure that your code is valid.

✔ **Charset** Charset is the character encoding used in the document. It tells the browser how to interpret the characters in the document.

Charset is the character encoding used in the document. It tells the browser how to interpret the characters in the document. The most common charset is UTF-8. It is a variable-length character encoding that can represent any character in the Unicode standard. UTF-8 is also the most widely supported charset. It is recommended to use UTF-8 for all new websites. This ensures that your website is accessible to all users, regardless of their language or locale. The charset is typically declared in the HTML document using the charset attribute. For example, you can use the following code to declare the charset as UTF-8: `<meta charset="UTF-8">`
