 Doctype Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in.

Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in. The most common doctype is HTML5. It is important to have the correct doctype to ensure that the browser renders the page correctly. If you are using an older version of HTML, you should use the appropriate doctype for that version. For example, if you are using HTML4, you should use the HTML4 doctype. If you are using HTML5, you should use the HTML5 doctype. The HTML5 doctype is the simplest and most widely supported. It is also the most future-proof. So, if you are writing a new HTML document, you should always use the HTML5 doctype. This will ensure that your document is compatible with all modern browsers and will be able to handle future updates to the HTML standard.

 W3C Validity W3C Validity is a tool that checks if your HTML document is valid according to the W3C standards.

W3C - World Wide Web Consortium. It is an international community that develops and maintains standards for the World Wide Web. The W3C standards are the rules that govern how web pages are created and how they are displayed in a web browser. The W3C standards are designed to ensure that web pages are consistent and interoperable. This means that a web page created according to the W3C standards should look and behave the same way in all web browsers. The W3C standards are also designed to be easy to use and to evolve over time. This means that the W3C standards can be updated to reflect new technologies and user needs. The W3C standards are the foundation of the World Wide Web. Without the W3C standards, the web would be a chaotic and inconsistent place. So, if you are creating a web page, it is important to follow the W3C standards. This will ensure that your page is valid and that it will be displayed correctly in all web browsers.

 Charset Charset is the character set used in the document. It defines the mapping between the bytes in the document and the characters that they represent.

Charset is the character set used in the document. It defines the mapping between the bytes in the document and the characters that they represent. The most common charset is UTF-8. It is a variable-length character set that can represent any character in the Unicode standard. UTF-8 is also the most widely supported charset. It is used by almost all modern web browsers and operating systems. So, if you are writing a new HTML document, you should always use the UTF-8 charset. This will ensure that your document is compatible with all modern browsers and operating systems. The UTF-8 charset is also the most future-proof. It can handle any character that might be added to the Unicode standard in the future. So, using UTF-8 is the best way to ensure that your document will be able to handle any character that might be needed in the future.
