✔ **Doctype** Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in.

Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in. The most common doctype is HTML5. It is important to have the correct doctype to ensure that the browser renders the page correctly. If you are using an older version of HTML, you should use the appropriate doctype for that version. For example, if you are using HTML4, you should use the HTML4 doctype. If you are using HTML5, you should use the HTML5 doctype. The HTML5 doctype is the simplest and most widely supported. It is also the most future-proof. Therefore, it is recommended to use the HTML5 doctype for all new websites.

● **W3C Validity** W3C is the World Wide Web Consortium. It is the main international standards organization for the World Wide Web. It develops and maintains the standards for HTML, CSS, and JavaScript. It also provides tools and resources for developers to ensure that their websites are valid and conform to the standards.

W3C - World Wide Web Consortium. It is the main international standards organization for the World Wide Web. It develops and maintains the standards for HTML, CSS, and JavaScript. It also provides tools and resources for developers to ensure that their websites are valid and conform to the standards. The W3C website is a valuable resource for developers. It provides information about the latest standards and how to implement them. It also provides tools for validating code and checking for accessibility issues. Therefore, it is recommended to use the W3C website as a reference for all web development projects.

✔ **Charset** Charset is the character set used in the document. It defines the mapping between the bytes in the document and the characters that they represent. The most common charset is UTF-8. It is important to specify the charset in the document to ensure that the characters are rendered correctly.

Charset is the character set used in the document. It defines the mapping between the bytes in the document and the characters that they represent. The most common charset is UTF-8. It is important to specify the charset in the document to ensure that the characters are rendered correctly. If you do not specify the charset, the browser will assume a default charset, which may not be the correct one. This can lead to garbled text and other rendering issues. Therefore, it is recommended to always specify the charset in the document header.
