✔ **Doctype** Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in.

Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in. The most common doctype is HTML5. It is important to have a doctype because it affects the rendering of the page. Without a doctype, the browser will use a default doctype, which may not be the one you want. The doctype is written as a line of text at the top of the HTML file. It starts with <!DOCTYPE and ends with >. The version of HTML is written in the middle. For example, <!DOCTYPE html> is the doctype for HTML5. There are also doctypes for HTML4 and XHTML. The doctype is case-insensitive, so <!doctype html> is also valid. It is a good practice to always include a doctype at the top of your HTML files.

● **W3C Validity** W3C is the World Wide Web Consortium. It is the main international standards organization for the World Wide Web. It develops and maintains the standards for HTML, CSS, and JavaScript.

W3C is the World Wide Web Consortium. It is the main international standards organization for the World Wide Web. It develops and maintains the standards for HTML, CSS, and JavaScript. The W3C website is a good resource for learning more about web standards. It also provides tools for checking the validity of your code. The W3C Validator is a free online tool that checks your HTML and CSS code against the W3C standards. It tells you if there are any errors and provides suggestions for how to fix them. The W3C Validator is a useful tool for anyone who is developing websites. It helps you to ensure that your code is valid and conforms to the W3C standards. This is important because it ensures that your website will work correctly in all browsers. The W3C Validator is a free online tool that checks your HTML and CSS code against the W3C standards. It tells you if there are any errors and provides suggestions for how to fix them. The W3C Validator is a useful tool for anyone who is developing websites. It helps you to ensure that your code is valid and conforms to the W3C standards. This is important because it ensures that your website will work correctly in all browsers.

✔ **Encoding** Encoding is the process of converting data into a format that can be transmitted over a network. The most common encoding is UTF-8. It is a variable-length character encoding that can represent any character in the Unicode standard.

Encoding is the process of converting data into a format that can be transmitted over a network. The most common encoding is UTF-8. It is a variable-length character encoding that can represent any character in the Unicode standard. UTF-8 is the most widely used encoding on the web. It is compatible with ASCII, which means that any text that is valid ASCII is also valid UTF-8. UTF-8 is also efficient, which means that it takes up less space than other encodings. UTF-8 is the recommended encoding for all websites. It is important to use the correct encoding because it affects how your website is displayed in different browsers. If you use the wrong encoding, your website may look broken or display incorrect characters. UTF-8 is the most widely used encoding on the web. It is compatible with ASCII, which means that any text that is valid ASCII is also valid UTF-8. UTF-8 is also efficient, which means that it takes up less space than other encodings. UTF-8 is the recommended encoding for all websites. It is important to use the correct encoding because it affects how your website is displayed in different browsers.
