✔ **Doctype** Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in.

Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in. The most common doctype is HTML5. It is important to have a doctype to ensure that the browser renders the page correctly. Without a doctype, the browser will use a default doctype, which may not be the one you want. This can lead to rendering issues, especially with CSS and JavaScript. So, always include a doctype at the top of your HTML document.

● **W3C Validity** W3C Validity is a tool that checks if your HTML document is valid according to the W3C standards.

W3C - World Wide Web Consortium. It is an international community that develops and maintains standards for the World Wide Web. The W3C standards are used to ensure that web pages are consistent and interoperable. This means that they can be accessed and used by a wide range of devices and browsers. The W3C standards are also used to ensure that web pages are accessible to people with disabilities. This is done by following the Web Content Accessibility Guidelines (WCAG). So, it's important to use W3C standards when creating web pages to ensure they are consistent, interoperable, and accessible.

✔ **Charset** Charset is the character set used in the document. It defines the mapping between the bytes in the document and the characters they represent.

Charset is the character set used in the document. It defines the mapping between the bytes in the document and the characters they represent. The most common charset is UTF-8. It is important to specify the charset in the document to ensure that the characters are displayed correctly. Without a charset, the browser will use a default charset, which may not be the one you want. This can lead to encoding issues, especially with non-ASCII characters. So, always specify the charset in the document to ensure that the characters are displayed correctly.
