✔ **Doctype** Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in.

Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in. The most common doctype is HTML5. It is important to have the correct doctype to ensure that the browser renders the page correctly. If you are using an older version of HTML, you should use the appropriate doctype for that version. For example, if you are using HTML4, you should use the HTML4 doctype. If you are using HTML5, you should use the HTML5 doctype. The HTML5 doctype is the simplest and most widely supported. It is also the most future-proof. It is recommended to use the HTML5 doctype for all new websites.

● **W3C Validity** W3C is the World Wide Web Consortium. It is the main international standards organization for the World Wide Web. It develops and maintains the standards for HTML, CSS, and XML. It also provides tools and resources for developers to ensure that their websites are valid and conform to the standards.

W3C - World Wide Web Consortium. It is the main international standards organization for the World Wide Web. It develops and maintains the standards for HTML, CSS, and XML. It also provides tools and resources for developers to ensure that their websites are valid and conform to the standards. The W3C website is a valuable resource for developers. It provides information about the latest standards and how to implement them. It also provides tools for validating code and checking for accessibility issues. If you are a developer, it is important to use the W3C website to stay up-to-date on the latest standards and to ensure that your website is valid and accessible.

✔ **Charset** Charset is the character set used in the document. It defines the mapping between the bytes in the document and the characters that they represent. The most common charset is UTF-8. It is important to specify the charset in the document to ensure that the browser can correctly interpret the characters.

Charset is the character set used in the document. It defines the mapping between the bytes in the document and the characters that they represent. The most common charset is UTF-8. It is important to specify the charset in the document to ensure that the browser can correctly interpret the characters. If you are using a different charset, you should specify it in the document. For example, if you are using UTF-16, you should specify UTF-16. The charset is specified in the document using the charset attribute. It is recommended to use UTF-8 for all new websites.
