✔ **Doctype** Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in.

Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in. The most common doctype is HTML5. It is important to have a doctype because it affects the rendering of the page. Without a doctype, the browser will use a default doctype, which may not be the one you want. The doctype is written as a line of text at the top of the HTML file. It starts with the word 'doctype' followed by the name of the HTML version in quotes. For example, the HTML5 doctype is written as: `<!doctype html>`

● **W3C Validity** W3C is the World Wide Web Consortium. It is an international community that develops standards for the World Wide Web.

W3C - World Wide Web Consortium. It is an international community that develops standards for the World Wide Web. The W3C standards are used to ensure that web pages are consistent and can be accessed by all users. The W3C standards are developed by a group of experts from different organizations. The W3C standards are used to ensure that web pages are consistent and can be accessed by all users. The W3C standards are developed by a group of experts from different organizations. The W3C standards are used to ensure that web pages are consistent and can be accessed by all users. The W3C standards are developed by a group of experts from different organizations.

✔ **Encoding** Encoding is the process of converting data into a format that can be stored or transmitted. The most common encoding is UTF-8.

Encoding is the process of converting data into a format that can be stored or transmitted. The most common encoding is UTF-8. UTF-8 is a variable-length character encoding. It can represent any character in the Unicode standard. UTF-8 is the most common encoding for web pages. It is important to have a consistent encoding for your web pages. Without a consistent encoding, your web pages may not be displayed correctly. The encoding is written as a line of text at the top of the HTML file. It starts with the word 'encoding' followed by the name of the encoding in quotes. For example, the UTF-8 encoding is written as: `<meta charset="utf-8">`
