✔ **Doctype** Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in.

Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in. The most common doctype is HTML5. It is important to have a doctype to ensure that the browser renders the page correctly. Without a doctype, the browser will use a default doctype, which may not be the one you want. The doctype also affects the layout of the page. For example, the HTML5 doctype allows for a more flexible layout than the HTML4 doctype. The doctype also affects the way that the browser handles errors. For example, the HTML5 doctype will show a warning message if there is a problem with the doctype, while the HTML4 doctype will not.

● **W3C Validity** W3C is the World Wide Web Consortium. It is the main international standards organization for the World Wide Web. It develops and maintains the standards for HTML, CSS, and JavaScript. It also provides a service for validating web pages against these standards.

W3C - World Wide Web Consortium. It is the main international standards organization for the World Wide Web. It develops and maintains the standards for HTML, CSS, and JavaScript. It also provides a service for validating web pages against these standards. The W3C validity checker is a tool that can be used to check if a web page is valid according to the W3C standards. It can be used to check the HTML, CSS, and JavaScript of a web page. The checker will show any errors or warnings that it finds. This can be useful for developers to ensure that their web pages are valid and that they will render correctly in all browsers. The checker can also be used to check the accessibility of a web page. It will show any issues that may prevent people with disabilities from using the page. The W3C validity checker is a free service that is available to everyone. It can be accessed online or downloaded as a software application. The checker is a useful tool for anyone who is developing a web page.

✔ **Charset** Charset is the character set used in the document. It defines the mapping between the bytes in the document and the characters that they represent. The most common charset is UTF-8. It is important to specify the charset in the document to ensure that the characters are rendered correctly.

Charset is the character set used in the document. It defines the mapping between the bytes in the document and the characters that they represent. The most common charset is UTF-8. It is important to specify the charset in the document to ensure that the characters are rendered correctly. Without a charset, the browser will use a default charset, which may not be the one you want. The charset also affects the way that the browser handles errors. For example, the UTF-8 charset will show a warning message if there is a problem with the charset, while the default charset will not. The charset also affects the way that the browser displays the page. For example, the UTF-8 charset will allow for a more flexible layout than the default charset. The charset also affects the way that the browser handles links. For example, the UTF-8 charset will allow for a more flexible link structure than the default charset. The charset is a useful tool for developers to ensure that their web pages are valid and that they will render correctly in all browsers.
