✔ **Doctype** Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in.

Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in. The most common doctype is HTML5. It is important to have the correct doctype to ensure that the browser renders the page correctly. If you are using an older version of HTML, you should use the appropriate doctype for that version. For example, if you are using HTML4, you should use the HTML4 doctype. If you are using HTML5, you should use the HTML5 doctype. The HTML5 doctype is the most common and is recommended for all new websites.

● **W3C Validity** W3C is the World Wide Web Consortium. It is the international community that develops and maintains the standards for the World Wide Web.

W3C is the World Wide Web Consortium. It is the international community that develops and maintains the standards for the World Wide Web. The W3C standards are the foundation of the World Wide Web. They define how web pages are structured and how they are displayed. The W3C standards are developed through a process of consensus. Members of the W3C community propose changes to the standards, and these changes are then discussed and voted on by the community. Once a change is approved, it becomes part of the W3C standards. The W3C standards are used by web developers to create web pages that are compliant with the standards. This ensures that web pages are displayed consistently across different browsers and devices.

✔ **Charset** Charset is the character set used in the document. It defines the mapping between the characters in the document and the bytes in the document.

Charset is the character set used in the document. It defines the mapping between the characters in the document and the bytes in the document. The most common charset is UTF-8. It is important to have the correct charset to ensure that the characters in the document are displayed correctly. If you are using UTF-8, you should use the UTF-8 charset. If you are using a different character set, you should use the appropriate charset for that character set. The charset is specified in the document using the charset attribute. For example, you can specify the UTF-8 charset using the following code: `<meta charset="UTF-8">`
