✔ **Doctype** Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in.

Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in. The most common doctype is HTML5. It is important to have the correct doctype to ensure that the browser renders the page correctly. If you are using an older version of HTML, you should use the appropriate doctype for that version. For example, if you are using HTML4, you should use the HTML4 doctype. If you are using HTML5, you should use the HTML5 doctype. The HTML5 doctype is the most common and is recommended for all new websites.

● **W3C Validity** W3C is the World Wide Web Consortium. It is the main international standards organization for the World Wide Web. It develops and maintains the standards for HTML, CSS, and XML. You can use the W3C validator to check if your code is valid according to the standards.

W3C - World Wide Web Consortium. It is the main international standards organization for the World Wide Web. It develops and maintains the standards for HTML, CSS, and XML. You can use the W3C validator to check if your code is valid according to the standards. The W3C validator is a free online tool that checks your code against the W3C standards. It can find errors in your code and provide suggestions for how to fix them. This is a useful tool for developers to ensure that their code is valid and follows the standards. It can help you avoid compatibility issues with different browsers and ensure that your website is accessible to all users.

✔ **Charset** Charset is the character set used in the document. It defines the mapping between the bytes in the document and the characters that they represent. The most common charset is UTF-8. It is important to specify the charset in the document to ensure that the browser can correctly interpret the characters.

Charset is the character set used in the document. It defines the mapping between the bytes in the document and the characters that they represent. The most common charset is UTF-8. It is important to specify the charset in the document to ensure that the browser can correctly interpret the characters. If you do not specify the charset, the browser will assume a default charset, which may not be the correct one for your document. This can lead to encoding issues and garbled text. By specifying the charset, you ensure that the browser knows exactly how to interpret the characters in your document. This is especially important for documents that contain non-ASCII characters, such as accented letters or characters from other languages.
