Charset is the character set used in the document. It tells the browser which encoding the document is written in. The most common charset is UTF-8. It is important to have the correct charset to ensure that the browser renders the page correctly. If you are using an older version of HTML, you should use the appropriate charset for that version. For example, if you are using HTML4, you should use the HTML4 charset. If you are using HTML5, you should use the HTML5 charset. The HTML5 charset is the simplest and most widely supported. It is also the most future-proof. It is recommended to use the HTML5 charset for all new websites.
