✔ **Doctype** Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in.

Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in. The most common doctype is HTML5. It is important to have a doctype to ensure that the browser renders the page correctly. Without a doctype, the browser will use a default doctype, which may not be the one you want. The doctype also affects the layout of the page. For example, the HTML5 doctype allows for a more flexible layout than the HTML4 doctype. It is recommended to use the HTML5 doctype for all new websites.

● **W3C Validity** W3C is the World Wide Web Consortium. It is the main international standards organization for the World Wide Web. It develops and maintains the standards for HTML, CSS, and XML. It also provides a service for validating web pages against these standards.

W3C - World Wide Web Consortium. It is the main international standards organization for the World Wide Web. It develops and maintains the standards for HTML, CSS, and XML. It also provides a service for validating web pages against these standards. The W3C validity checker is a tool that can be used to check if a web page is valid according to the W3C standards. It can be used to check the HTML, CSS, and XML of a web page. The checker will report any errors or warnings that it finds. This can be useful for ensuring that a web page is valid and that it will render correctly in all browsers. It is recommended to use the W3C validity checker for all new websites.

✔ **Charset** Charset is the character set used in the document. It tells the browser which characters are allowed in the document. The most common charset is UTF-8. It is important to have a charset to ensure that the browser renders the page correctly. Without a charset, the browser will use a default charset, which may not be the one you want. The charset also affects the layout of the page. For example, the UTF-8 charset allows for a more flexible layout than the ASCII charset. It is recommended to use the UTF-8 charset for all new websites.

Charset is the character set used in the document. It tells the browser which characters are allowed in the document. The most common charset is UTF-8. It is important to have a charset to ensure that the browser renders the page correctly. Without a charset, the browser will use a default charset, which may not be the one you want.
