 Doctype Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in.

Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in. The most common doctype is HTML5. It is important to have the correct doctype to ensure that the browser renders the page correctly. If you are using an older version of HTML, you should use the appropriate doctype for that version. For example, if you are using HTML4, you should use the HTML4 doctype. If you are using HTML5, you should use the HTML5 doctype. The HTML5 doctype is the simplest and most widely supported. It is also the most future-proof. So, if you are writing a new HTML document, you should always use the HTML5 doctype.

 W3C Validity W3C Validity is a service that checks if your HTML document is valid according to the W3C standards.

W3C - World Wide Web Consortium. It is an international community that develops and maintains standards for the World Wide Web. The W3C standards are the foundation of the web. They ensure that web pages are consistent and interoperable. The W3C standards are developed through a process of consensus. This means that all members of the W3C community have a say in the standards. The W3C standards are also updated regularly to keep up with the latest technology. The W3C standards are the most widely used standards for the web. They are the foundation of the web. Without the W3C standards, the web would be a chaotic mess. So, if you are writing a web page, you should always follow the W3C standards. This will ensure that your page is consistent and interoperable with other pages on the web. It will also ensure that your page is future-proof. So, always follow the W3C standards.

 HTML Errors HTML Errors are mistakes in your HTML code that prevent the browser from rendering the page correctly.

HTML Errors are mistakes in your HTML code that prevent the browser from rendering the page correctly. There are many different types of HTML errors. Some are simple typos, while others are more complex. The most common HTML errors are missing closing tags, unclosed elements, and invalid attributes. These errors can cause the browser to display the page incorrectly. They can also cause the page to load more slowly. So, it is important to check for HTML errors regularly. There are many tools available to help you check for HTML errors. One of the most popular is the W3C Validity checker. This tool will check your HTML code for errors and tell you what the errors are. It will also tell you how to fix the errors. So, if you are writing a web page, you should always use a tool like the W3C Validity checker to check for HTML errors. This will ensure that your page is rendered correctly and loads quickly.
